

Simply Secure[™]

Solutions for Security and Access Control

About Us

Security is a major concern, and with recent advances in technology, it is now more affordable than ever. Entry-Master Systems (EMS) specializes in the development and manufacturing of reliable access control security systems. Whether the requirement is for two secured doors or an integrated system for hundreds of doors, multiple sites and thousands of employees, EMS has a cutting-edge solution.

Our experience in the access control and security industry spans three decades, and our engineers all have extensive field experience. EMS continually strives to provide excellent customer support.

The Entry-Master® suite of products incorporate state-of-the-art technology that has satisfied some of the most demanding security needs of educational, medical and banking institutions, high profile corporations, law enforcement and government facilities.

Option-2 and Option-4

**Option-2 does not include iButton keyfobs.*

Our Products

Entry-Master products are compatible with most industry-standard hardware – upgrading existing systems has never been easier. System setup, deployment and training time are typically a fraction of that required by other systems. All Entry-Master products are based upon the same basic hardware components; thus every EMS solution is completely scalable.

Option-2

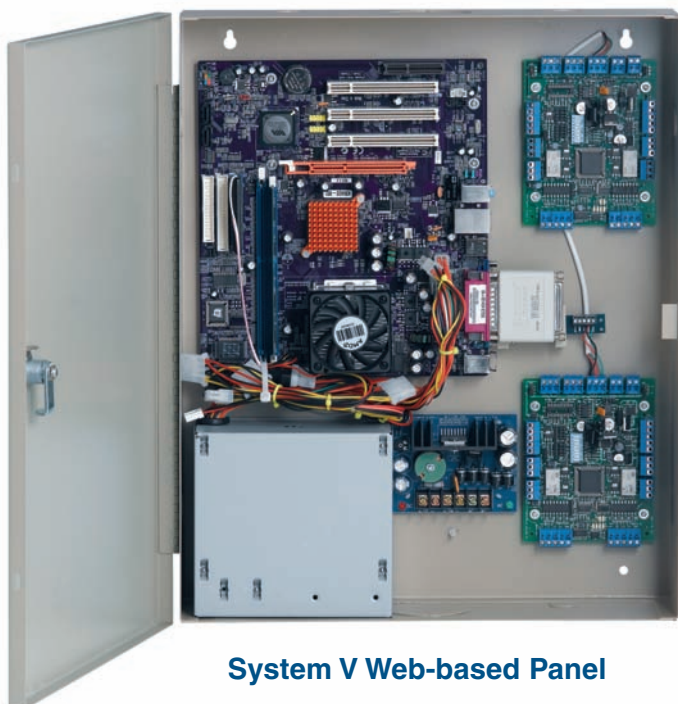

Very affordable solution for small, two to eight door applications. This system is especially convenient for those customers who already have card readers and locking mechanisms in place. Windows-based Option-X software is included with each system. Simple to setup – simple to use.

Option-4

Complete package using very convenient iButton® technology. The most economical solution for four to eight doors, this system includes readers and iButton keyfobs. Uses the same simple software as the Option-2.

System V

The EMS premier web-based product, designed for medium to enterprise-scale commercial system needs. Monitor all aspects of your security from any computer using a browser; monitor/control multiple sites; expandable, easily integrated, customizable reports, adaptable, and powerful!
