

COMMERCIAL SECURITY CARD ACCESS CONTROL

PRODUCT OVERVIEW

Entry-Master® System V Card Access System combines multiple scanning technologies with “state-of-the-art” PC components and comprehensive, field-proven access control software. The result is a progressive access control system that is flexible, yet easy to understand and operate.

Entry-Master® System V Features

- Web-enabled environment
- No additional software required
- Automated security breach notification
- Virus-proof and hacker-resistant
- Best suited for larger systems

Web-enabled environment

The *Entry-Master* System can be viewed with any standard browser. This makes your security system easy to learn and use, reducing your time and cost for training new workers. Sign up for a live demonstration on our Web site (www.entry-master.com/about_web.shtml).

No additional software required

Entry-Master is the only card access security provider that delivers this Web capability embedded within the product - no purchase of outside software is necessary!

Automated security breach notification

Entry-Master can automatically page or email appropriate personnel, alerting them of unusual activity in your facility. You define what is unusual activity and you define who gets notification (and how). Options for notification include a telephone call, pager or email. Our easy to use Web browser screens give your personnel the flexibility to make these changes.

Simply Secure™

“The *Entry-Master*® System has been very reliable, and for over 18 years has provided outstanding security for our buildings and student residents.”

Renee M. Streib
Housing Facilities Coordinator
Johns Hopkins University

Entry-Master is a registered trademark of Entry-Master Systems, Inc.

Virus-proof and hacker-resistant

Although *Entry-Master* software is accessed through a standard Windows® browser, the data is filtered through a secure host environment that gives you 100% protection from the viruses that threaten your system. Our host environment uses a unique executable format, very different from Windows, UNIX or Linux; hackers will experience great difficulty accessing your Entry-Master file system.

In our 20-year history, no Entry-Master client has ever had their security system compromised by either a hacker or from a virus.

Best suited for larger systems

Entry-Master® software was initially designed for larger systems, where volume of card use traffic was high, and instant response times were critical. In recent years the system has been scaled to allow more affordable installation in smaller sites. Unlike most systems, once a small Entry-Master system is installed, it is easily scaled upwards to a larger platform, without losing any of the functionality, speed or reliability that has been the hallmark of the Entry-Master Systems Inc. success story.
