

Appendix B – Entry-Master System Alarm Messages

This appendix covers all messages issued by a standard Entry-Master System. The messages on your particular installation may not exactly match the messages in this listing. However, in most cases the message (as indicated by the message number) means the same thing. For example, a message code 06 - Access Granted by Valid Card, means exactly what it says. Your Entry-Master Dealer may have changed message 06 to read: Gate Raised by Valid Passcard, but the meaning of the message is still essentially the same.

Code	Description of Activity/Alarm Message
00	<p>System Re-Initialized.</p> <p>This message appears whenever the system is re-booted (re-started) or when your Entry-Master Dealer is performing work on the system (i.e. adding a reader, checking the system, etc.). It does not affect the system's performance or ability to read cards and unlock doors.</p>
01	<p>Door Opened.</p> <p>This message occurs any time a door which uses card access is opened by means of a card reader (i.e. a valid card was presented to the reader). This message appears only on systems, which have monitoring devices attached and supervised by the Entry-Master System.</p>
02	<p>Door has Closed.</p> <p>This message occurs when any door in the system closes. This message appears only on systems which have monitoring devices attached and supervised by the Entry-Master System.</p>
03	<p>Door Opened from the Inside.</p> <p>This message occurs any time a door which uses card access is opened by normal means (i.e., by the use of a valid card OR by a Request to Exit (REX) from the inside). This message appears only on systems which have monitoring devices attached and supervised by the Entry-Master System.</p>
04	<p>Door Left in Open Position!</p> <p>This message occurs whenever a door is left propped open in excess of the time allowed by the system (which is configured through the Entry-Master System)</p>

Note: Appendix B is not finished. If you have any questions, please consult your Entry-Master Dealer.
